

The Wikipedia article generator

Uzair Rafiq, Yousaf Uyghur, Okasha

Things you need to install to run this code.

- To run this code, we installed Beautiful soup, requests and web browser library/
- To install this library, go to command prompt in your pc and write “pip install package file name”
- The command prompt will automatically install the latest version of the required libraries in your pc

What the code is about?

- It will generate a random Wikipedia article for you
- It will generate an article based on a keyword that you enter
- It will ask you if you wish to view this page or not
- If you like it, it will open the required Wikipedia page in your default browser.

Problems

- If keyword is incorrect or not accurate it will receive an error
- There are no constraints to the randomness of articles that will be generated.

Notes

- We used a html page parsing library
- We also used a default random link provided to us by Wikipedia
- We tried implementing a favorite articles feature as well but didn't succeed
